# Annual Report To Employees

#### Highlighting Milwaukee Road opera- revenue increases. Notable were those tions in 1974

- ☐ Operating revenues amounted to \$404,316,184, up \$39,898,174 over 1973.
- □ Operating expenses and costs totaled \$403,203,628, up \$42,190,512 over 1973.
- ☐ 13,595 employees received \$188,-688.092 in wages, plus \$39,237,471 in supplements that included \$9,628,057 in health and welfare benefits.
- ☐ Aggregate annual income of each employee was \$16,765; the average hourly wage was \$8.343.

#### The Year In Brief

Inflationary 1974 was a year of challenge to the Milwaukee Road, and one well met. For the first time since 1967, the ratio of operating expenses to revenues was below 80% at 79.45. This efficiency was primarily due to improved maintenance and management practices, and increased revenues. While traffic levels were down from 1973, rate increases were reflected in substantial of 4% in March and 10% in June.

An era of Milwaukee Road history ended on June 16 when the railroad retired its last electric locomotives from operation in Montana and Idaho.

New equipment acquired included 46 diesel electric locomotives, more than 1,300 freight cars and 41 bi-level commuter coaches. Shop forces rebuilt 550 cars and 18 SD10 diesel locomotives.

Inherent efficiencies of the new locomotives contributed to an 8% reduction in fuel consumption over 1973, but fuel cost per gallon was more than twice in December what it was a year earlier. Each penny-per-gallon increase ups the railroad's operating expenses by approximately \$1-million a year.

While lumber traffic dropped 22.3% from its 1973 level because of construction decline throughout the nation, movement of motor vehicles was up 6.5% despite severe auto industry dilemmas during the year. Primary factors of this increase were expansion of auto handling facilities and intensive marketing efforts. Piggyback and container loadings also increased by 13.4% over the previous year, reflecting a healthy gain in revenues.

New train services resulting from modern marketing techniques were a "mini-unit train" (MUT) for grain shuttling and joint coal trains operating in conjunction with the Burlington Northern.

The MUT ran six days a week with 30 large covered grain hopper cars on fast turnaround schedules between country grain elevators in central lowa and Minnesota and Mississippi River bargeloading facilities.

The joint unit coal trains operate between a mine at Colstrip, Mont. and a new power plant at Columbia, Wis.; effective June 1 this year service is supplied between the Colstrip Mine and a paper mill at Wisconsin Rapids. With a similar operation commencing in 1975 between a North Dakota mine and a South Dakota power plant, the railroad expects to double its volume of coal.

### New, rebuilt locomotives and cars increase fleet

Purchases of rolling stock in 1974 accelerated over the previous year as 1,455 new units brought to 33,521 the number owned or leased in service. Included in the new equipment were 1,368 freight cars, 46 locomotives and 41 bi-level commuter coaches.

Of significance are 300 new 100-ton covered hopper cars, 570 70-ton box cars, 40 70-ton high-cubic capacity box cars for appliances, and 80 100-ton box cars for aluminum and copper ingots. Also new to the fleet are 197 fully enclosed automobile racks and 66 bi-level auto carriers.

Twenty-eight new Electro-Motive SD40 diesel locomotives will be used on main-line high-speed freights; eight GE model U30C's were added for use in the joint Milwaukee Road/BN coal train operation between a mine at Colstrip, Mont. and a commercial power plant at Columbia, Wis: Each of the 36 units is rated at 3,000 horsepower. Additionally, 10 2,000 horsepower EMD GP38 diesels were added primarily for branch-line freight operation. All remaining electric locomotives were retired during the year.

Last year's rebuilding program turned out 450 40-ft. box cars of 50-ton capacity, 100 high stake log flats and 18 SD10 locomotives of 1,800 horsepower.

Total freight car capacity of the fleet is 2,079,361 tons; total diesel electric locomotive horsepower capacity is 1,615,200.

TAXES AND RENTS \$81,092,532 (\$67,862,066)

# New facilities, major improvements highlight year's activities

#### **Bridges**

The 1974 bridge program was extensive, including several renewals of steel spans, pile trestles and culverts. Scheduled and emergency projects—apart from day-to-day maintenance—were accomplished at a combined total cost of \$750,000.

Notable was replacement of six steel spans up to 50 ft. long on the lowa Division at a cost of \$117,900. A \$73,300 30-span pile trestle renewal was completed on the Milwaukee Division, the largest single project of the total of 66 such spans renewed during the year.

Expenses for emergency renewal work amounted to \$273,000.

#### Construction

The company invested \$1 million in construction projects during 1974. Principal were three undertakings at Bensenville totaling \$365,000. One modified the existing diesel house to provide run-through facilities. Diesel fueling and sanding facilities were constructed; increased-capacity retarders and a 300-horsepower air compressor also were installed.

Throughout the system, \$200,000 went toward establishment of environmental control projects at 10 locations. One such major installation consists of a sanitary sewer system at St. Paul.

A project started between Herndon and Spencer is unusual in that funds for its completion will be furnished by the Milwaukee Road, shippers along the line and the State of Iowa. The work includes laying 20 miles of heavier rail, plus ties and ballast. Twelve miles were completed in 1974.

Constructed at Canal Yard in Milwaukee was a TOFC/ COFC facility with a 33-car capacity and storage area for 130 trailers.

Stepped-up plans for 1975 call for increased expenditures totaling \$2.5 million on buildings and related structures. Major projects involve environmental control (\$155,000), metal collection pans and upgrading of diesel service facilities (\$259,000), office and welfare building and related structures at St. Maries, Idaho

(\$300,000), and the new diesel house underway at St. Paul (\$1.5 million).

#### **Signals & Communications**

Activities surrounding signals and communications work were frequent. Major installations included automatic crossing gates or flashing light signals systemwide at 29 additional grade crossings, and six derailed car indicators on the Rocky Mountain Division.

The change from AC semaphore signals to color-light signals between LaCrosse and Mauston, Wis. was completed.

Automatic telephone exchange (PBX) facilities were installed at Deer Lodge (30 lines) and Harlowton (20 lines).

#### **Track**

A total 56 miles of new and second-hand rail was laid in 1974. In addition, 108.5 miles of track were upgraded, the longest stretch being 23.8 main-line miles between Rondout and Sturtevant. Nearly 80 miles of branch-line track were abandoned and turned over to outside contractors for removal.

These GM diesels are typical of 36 added to the fleet in 1974. The 3,000 horsepower locomotives are part of an aggressive power acquisition program started in 1972 that also included 10 new 2,000 horsepower GP38s delivered last year.

This "Piggy Packer" operated by the Milwaukee Motor Transportation Co., wholly-owned motor carrier subsidiary of the Milwaukee Road, facilitates trailer and container handling. Six of these units are now in operation with the company.
